ABARPAY
v0.6 Functionality &
Test Evidence Report
Independent Tiendita Inteligente prototype | Technical and functional assessment | 7 November 2026

Traceability Verified value

Repository carlosgdelvalle/tienditapp

Application folder prototypes/tiendita-inteligente-pey-v0.4/

Git branch feature/abarpay-v06-qa-analytics-bounded

Verified commit 015c61f01550ca609fe40c3b575e095ce4614789

Change review Draft PR #9; not merged or deployed

Release environment Local DEMO tested on v0.5; v0.6 manual QA pending

Executive summary

Abarpay v0.6 is a Spanish-language, single-store management and payment prototype with separate owner and
employee experiences. Its implemented capabilities cover product catalogues, inventory, sales, simulated and
PEY-oriented collection flows, fiados, replenishment, reporting, barcodes, local business queries, and bounded
inventory analytics. Real payments are implemented as controlled API paths, but this report does not certify a
completed production or public end-to-end bank transaction.

Test-evidence distinction: GitHub automated checks are green for the specified v0.6 commit. The user manually
demonstrated several workflows in a locally running v0.5 build. Those demonstrations support inherited
features, but do not prove that the v0.6 changes pass manual browser or hardware testing.

Validation legend

Code Meaning

AUTO PASS Automated code/HTTP regression test(s) passed at v0.6 head; external PEY is mocked.

MANUAL v0.5 User demonstrated a workflow in Chrome on predecessor v0.5, with screenshots or explicit observations.

NOT MANUAL v0.6 Implemented in v0.6 but not yet user-accepted on the new build.

UNVERIFIED LIVE Requires actual bank integration, deployed environment, compatible hardware or operational proof.

Evidence: GitHub Actions runs 42429145561 (ci) and 42429145554 (evaluator-v06), both successful at the verified commit.
Automated tests include mocked banking interfaces; a green Docker build does not imply deployment.

ABARPAY | v0.6 functional evidence | independent prototype 2

1 | Functionality inventory - Store operations

ID	Implemented capability	Evidence / acceptance status
F-01	Spanish Abarpay owner dashboard; store health and sales summary	AUTO PASS; MANUAL v0.5: UI opened, branding and connection confirmed
F-02	Employee checkout screen, login/PIN for LIVE, session/logout	AUTO PASS; dedicated employee UX not manually accepted
F-03	Eight seeded sample products, prices, categories, stock and availability	AUTO PASS; MANUAL v0.5: products and pricing visible
F-04	Cart quantities, server-calculated sales, employee attribution	AUTO PASS; MANUAL v0.5: simulated sales by Luis and María
F-05	Product reservations before settlement; stock deduction after confirmation	AUTO PASS; manual exact-once inventory test pending
F-06	Inventory, low-stock alerts, reorder suggestion, expiring lots	AUTO PASS; MANUAL v0.5: low-stock and expiry alerts visible
F-07	Create supplier purchase orders and receive stock with optional expiry	AUTO PASS; no complete manual cycle recorded
F-08	Fiado customers, credit limits, account balances and demo settlement	AUTO PASS; manual acceptance pending
F-09	In-app operational notices for owner and employees	AUTO PASS; notifications visible; event-by-event manual test pending
F-10	Daily close: commercial, PEY test, DEMO, fiado, pending; employee view	AUTO PASS; MANUAL v0.5: two simulated sales total MXN 566, separate from MXN 0 collected
F-11	Local read-only Spanish business Q&A over sales, stock, fiado, pending	AUTO PASS; MANUAL v0.5: correct commercial MXN 0 and DEMO MXN 566 answers

2 | Functionality inventory - Payments and controls

ID	Implemented capability	Evidence / acceptance status
F-12	QR-generation routes: DEMO, guarded PEY LIVE/CoDi QR and cent-test mode	AUTO PASS with mocked PEY; actual QR-to-bank-to-app cycle UNVERIFIED LIVE
F-13	CoDi Push and credit collection requests where enabled	AUTO PASS with mocked PEY;

blocked in public one-cent evaluator mode	
F-14 Bank webhook signature validation, independent PEY transaction lookup	
AUTO PASS with mocked PEY; live bank reconciliation UNVERIFIED	
F-15 Recovery polling for missed QR webhook; duplicate event/stock protection	
AUTO PASS with mocked PEY; live recovery UNVERIFIED	
F-16 Payment-status screen, receipts, sale cancellation safeguards	
AUTO PASS for backend cases; manual full receipt/cancel testing pending	
F-17 Bounded owner/employee authorization, PIN attempt limits, API headers	
AUTO PASS; not represented as production-grade security assurance	

ABARPAY | v0.6 functional evidence | independent prototype 3

3 | Functionality inventory - Capture, PWA and analytics

ID Implemented capability Evidence / acceptance status

F-18 Manual barcode lookup and persistent product association AUTO PASS; MANUAL v0.5: 111222->milk, reused automatically; 121212->yogurt

F-19 Camera barcode capture with compatible browser BarcodeDetector

Code implemented; NOT manually tested with physical barcode/camera

F-20 v0.6 barcode controls: EAN-8/UPC-A/EAN-13 check digit, INT-codes, explicit confirmation and legacy read

AUTO PASS; NOT MANUAL v0.6

F-21 Voice dictation and local text-to-cart interpretation; optional AI parser

AUTO PASS for rule-based parsing; microphone and external AI not manually verified

F-22 Owner opt-in audible alert for verified PEY payment notice AUTO source checks; MANUAL v0.5: activation + visual notification; sound on paid event UNVERIFIED

F-23 PWA shell, separate owner/employee manifests, limited offline static resources

AUTO PASS; MANUAL v0.5: Chrome showed installation dialog; install/offline not tested

F-24 v0.6 Abarpay app identity, SVG icon and PNG installation icons

AUTO PASS including PNG validity; Chrome install dialog NOT MANUAL v0.6

F-25 v0.6 input focus protection during six-second background refresh

Source regression check PASS; original defect reproduced on v0.5; NOT MANUAL v0.6

F-26 Single-store supplier demand summary by product/category, considering open orders

AUTO PASS; no external supplier transmission; NOT MANUAL v0.6

F-27 Illustrative 14-day sales-unit trend, clear fallback to catalogue assumptions

AUTO PASS; no proven predictive accuracy; NOT MANUAL v0.6

Scope and interpretation of analytics

F-26 (bounded GAP-022): a private, single-store replenishment summary. It is not cross-merchant demand aggregation, supplier data exchange or a supplier commercial platform.

F-27 (bounded GAP-024): a descriptive estimate, not validated advanced forecasting. When fewer than three distinct active sale dates exist in the 14-day window, the display labels estimates as catalogue assumptions instead of claiming that observed sales establish a reliable trend. PEY $0.01 tests are

excluded from the demand
series.

What is intentionally not included

Reliable offline sale creation/synchronization (GAP-014), multi-store isolation (GAP-019), cross-store supplier
intelligence, fully validated predictive forecasting, photograph recognition, WhatsApp/SMS messaging, and
external paid integrations are not delivered in this branch. It is not accurate to describe the PWA shell as an
offline-capable transaction system.

ABARPAY | v0.6 functional evidence | independent prototype 4

4 | Test evidence register

Test Area	Status	Evidence / qualification
T-01 Automated application tests	PASS	Six Python suites: test_flujos, test_pey_integracion, test_v04, test_live_evaluator, test_v05, test_v06; external PEY and AI mocked.
T-02 Code quality and package	PASS	JavaScript syntax checks, owner/employee pages and branding smoke checks, Docker image build.
T-03 Cash closing / simulation accounting	MANUAL v0.5 PASS	Luis MXN 341 + María MXN 225 = MXN 566 DEMO; commercial receipts MXN 0.00.
T-04 Business question responses	MANUAL v0.5 PASS	Commercial sales MXN 0 and simulated MXN 566 distinguished correctly.
T-05 Question text preservation	v0.5 FAIL; v0.6 AUTO PASS	Text repeatedly cleared during 6-second refresh; v0.6 source logic modified, manual retest pending.
T-06 Barcode registration / reuse	MANUAL v0.5 PASS	Arbitrary codes linked and recognized; newer v0.6 validation/confirmation only AUTO-tested.
T-07 Physical barcode camera	NOT TESTED	No confirmed hardware-scanning screenshot or acceptance.
T-08 Owner voice alert activation	MANUAL v0.5 PASS	Activation and toast confirmed; verified-payment speech not tested.
T-09 PWA install prompt	MANUAL v0.5 PASS	Chrome offered installation; old generic icon observed. v0.6 branded PNG/SVG tested automatically only.
T-10 PWA offline/install runtime	NOT TESTED	No install/standalone launch or offline behavior acceptance.
T-11 Exact-once manual inventory	NOT COMPLETED	Automated exact-once coverage exists; owner manual before/after inventory test not recorded.
T-12 Real bank payment / webhook		

NOT VERIFIED LIVE Code and mocked tests exist; no certified end-to-end paid QR workflow on deployed v0.6.

T-13 v0.6 supplier analytics / trends

AUTO PASS only Endpoint values, read-only behavior, permissions and insufficient-history labels tested; browser review pending.

T-14 Security and role separation

AUTO PASS only Live-mode simulated PIN/employee restriction checks; no independent penetration test.

5 | Release and handoff assessment

Engineering state: v0.6 functionality committed to its dedicated feature branch; two GitHub workflows passed at the exact commit. QA state: automated regression green; manual acceptance has not been completed for the new v0.6 features and corrections. Release state: PR #9 remains draft and unmerged; hosting, production security controls and public banking verification are outside this report.

Recommended evidence to gather before using this report as a release sign-off

- Retest continuous Spanish question entry on v0.6 for more than 30 seconds without focus loss.

- Scan an actual EAN/UPC physical barcode, register a new valid code with confirmation and verify re-scan.

- Check Chrome install name/icon, launch standalone and inspect offline behaviour without creating offline payments.

ABARPAY | v0.6 functional evidence | independent prototype 5

- Review both analytics tabs in Spanish and confirm "illustrative"/"catalogue assumption" caveats are visible.
- Complete manual inventory before/after simulation and validate employee restrictions without using real money.
